13 K-O-H-E-N.

14 I'm very, very strongly opposed to the  
15 shipment of nuclear waste to Nevada. We don't even  
16 have a nuclear power plant here. Why should we be the  
17 place where other states are sending their nuclear  
18 waste? It sends a message to everyone else in the  
19 country that they can go ahead and use the worst  
20 technology available to them and they don't have to  
21 take any responsibility for the mess it makes because  
22 they can ship all the bad stuff somewhere else,  
23 somewhere they don't care about, somewhere where they  
24 don't value. And I think that we should be encouraging  
25 people to take responsibility for the things they

0026

1 create and that all nuclear waste should stay where  
2 it's produced and maybe those states will ask  
3 themselves twice whether they want to be powered by  
4 nuclear versus some other kind of power. Also, I  
5 consider the Earth to be a living planet and I would  
6 like for it to stay alive and I don't think that we  
7 human beings who act like cockroaches so often have the  
8 right to bury poison in Earth.
